

"NEW VIEWS ON FERN PHYLOGENETICS: UPDATES FROM THE GOFLAG TARGETED ENRICHMENT PROBE SET"

Dr. Emily Sessa ✕

02 FEBRUARY | 3:00 PM
ENR2 BLDG., RM. S107

Emily Sessa is the Patricia K. Holmgren Director of the William and Lynda Steere Herbarium at the New York Botanical Garden. Research in the [Sessa lab](#) focuses broadly on plant systematics and understanding the evolutionary and ecological processes that shape plant diversity. Lab members work on a number of projects around this central theme, including systematics, historical biogeography, physiology, and responses to climate change and mass extinction. Organismally, the lab is strongly focused on the seed-free vascular plants: ferns and lycophytes.
